

The phanTECHNIKUM. A new adventure center in Wismar!

Look, experiment, invent, and discover. The phanTECHNIKUM in Wismar makes it possible. In the fall of 2012, the adventure center on Lübschen Burg street opened in the Hanseatic city to inspire technology enthusiasts, experimenters, and amateur inventors.

The Technical State Museum sets out in a new direction with phanTECHNIKUM. Up to now the non-profit operating company looked after the exhibition in the Schwerin Stables and the Wismar Greenhouse. Both presentations dealt with the history of technology in the federal state of Mecklenburg-Vorpommern. The phanTECHNIKUM will present, unite, and expand the two exhibitions in a completely new form under one roof.

At a former military site, the adventure center will receive visitors from near and far. The exhibition appeals to emotion and intellect, brings imagination, education, technology, and an adventurous world together in one building. An interactive exhibition with experiments, models, and hands-on labs will make the museum a lively institution in the future.

Besides the view into history, the present also does not go unmentioned: What are the inventions of the past? What developments are there today? A look back into history, and forward into the future show the four elements: fire, water, air, and earth. They divide the themes of the exhibition so the visitor becomes an explorer who enters a laboratory through a "fire tunnel," experiences wondrous experiments, or climbs the "water staircase."

The phanTECHNIKUM is aimed at a broad audience. Young and old are welcome from fall 2012. Not only tourists should use the services of the museum, but also engineers, students, apprentices and, student groups. Workshops, seminars, tours, and other events round out the exhibition. Especially in the summer months there will be many events that complement the happenings at phanTECHNIKUM.
